## PEP-II Overview & Ramp Down Plan

J. Seeman DOE PEP-II Ramp Down-D&D Review August 6-7, 2007

## Topics

- Overview of the PEP-II Collider
  PEP-II turns off September 30, 2008.
- General list of components and buildings
- Categories of issues
- Overview of Ramp Down Plan
- Overview of Minimum Maintenance State (MMS)

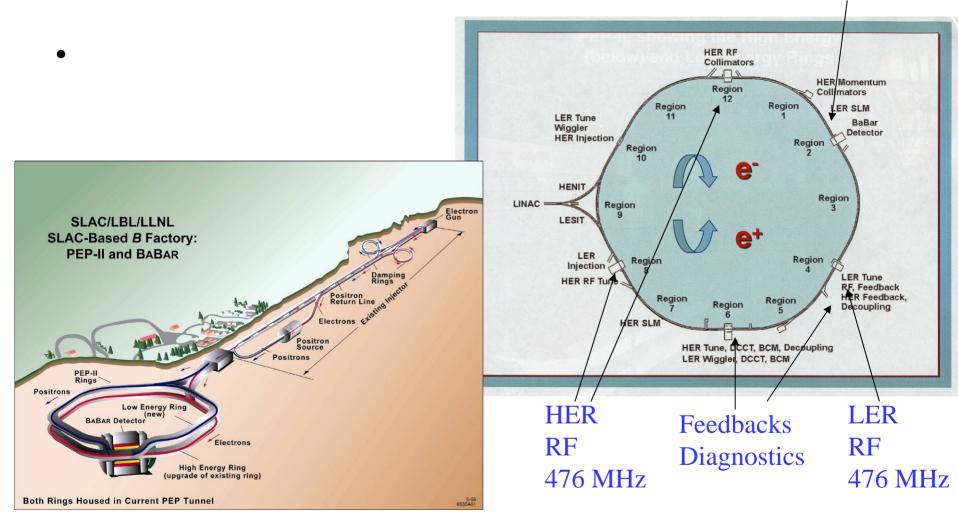

## **PEP-II B Factory at SLAC**

#### Located at the Stanford Linear Accelerator Center

#### PEP-II e<sup>+</sup>e<sup>-</sup> Collider

**BaBarDetector** 

C = 2200 m

3.1 GeV positrons x 9 GeV electrons

## **Beam Line Lengths**

- HER = 2200 m
- LER = 2200 m
- HER injection line = 2300 m
- LER injection line = 2900 m

• Total length of beam line = 9600 m  $-(\rightarrow 6.0 \text{ miles})$ 

### Other components

- ~10 miles of cable trays
- ~200 miles of cable (typically 1 inch dia)
- ~7 miles of water distribution lines
- 15 klystron-cavity systems
- ~900 electro-magnets per ring (~1800)
- ~6 miles of vacuum chambers
- Thousands of supports

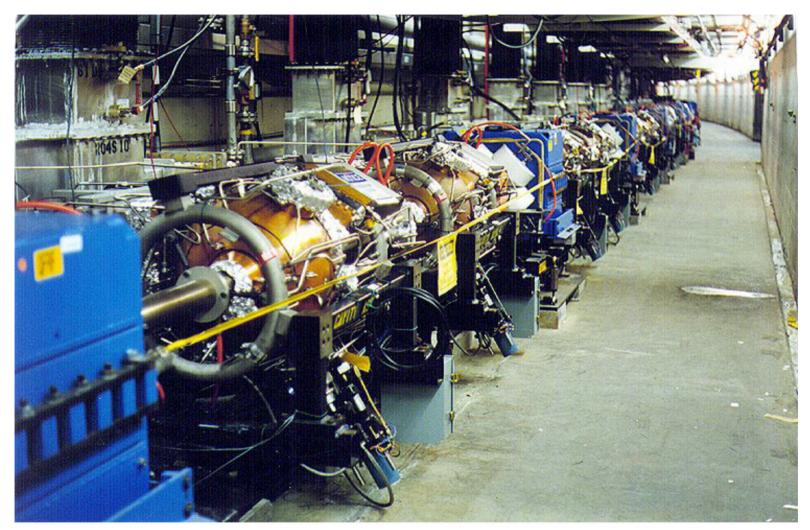

#### **B-Factory RF Klystrons**

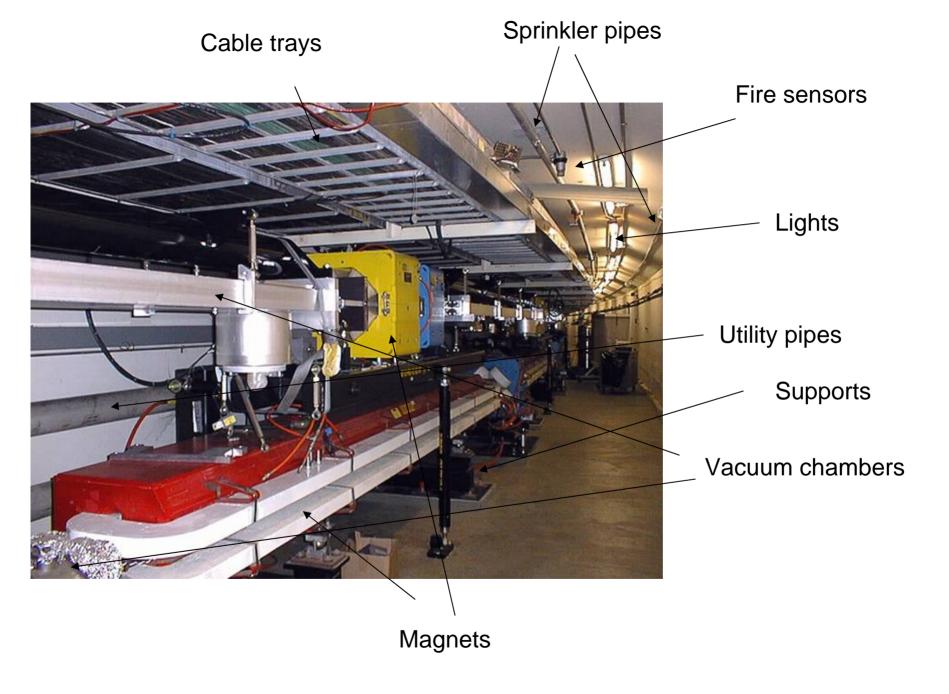

#### C. Pearson

#### **PEP-II RF Cavities**

HER Cavities Region 12

#### **Document Items**

- 1) The components in the tunnel should be technically documented and the data stored and correlated to the components.
- 2) Spare parts should be documented and collected.
- 3) The components should be offered to other DOE projects and/or facilities.

## My list of valuable components

- RF systems
- Electro-magnets
- Power supplies
- Vacuum pumps and diagnostics
- Some beam instrumentation (e.g. streak camera at ~180 k\$)
- Feedback amplifiers
- Water pumps, pump motors, heat exchangers

#### PEP-II Interaction Region (IR) Halls (six)

### PEP-II IR Hall 12 (on tour today)

#### PEP-II IR2 with BaBar (on tour)

#### PEP-II RF High Voltage Pads and Water Pump Stations (three)

# Support Buildings of PEP-II (six)

# PEP-II Buildings Outside the "Radiation Fence" (two)

#### PEP-II Water Pump Pads (three)

#### PEP-II Power Distribution (~five)

#### **PEP-II External Cable Trays**

#### PEP-II Klystron High Voltage Power Supplies (15 total)

#### PEP-II Air Vents (seven)

#### Cut and Cover Region of PEP-II

#### **PEP-II Klystron Building (three)**

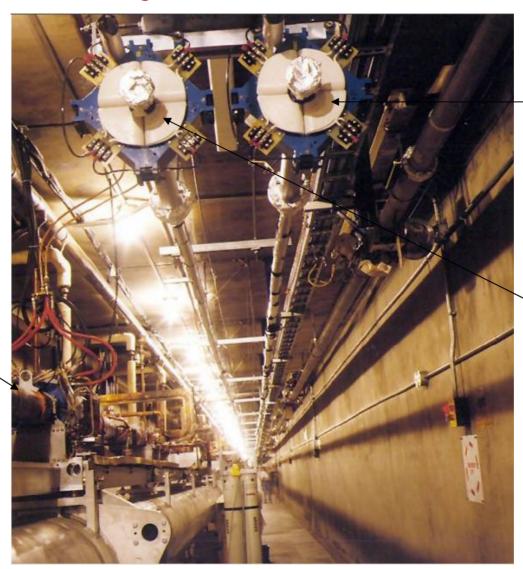

#### PEP-II Power Supply Buildings (nine)

#### **PEP-II Cable Distribution**

#### **PEP-II** injection line in Linac

LER injection

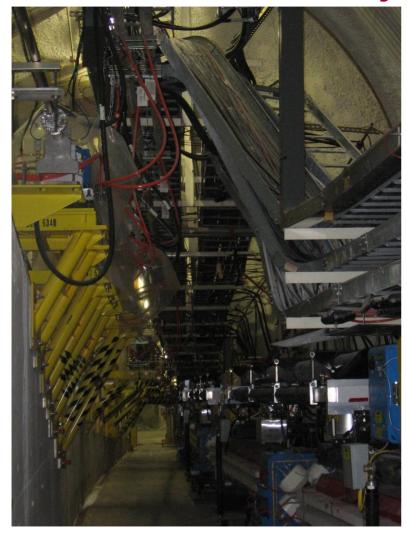

#### HER Injection Line

#### Injection Line (South)

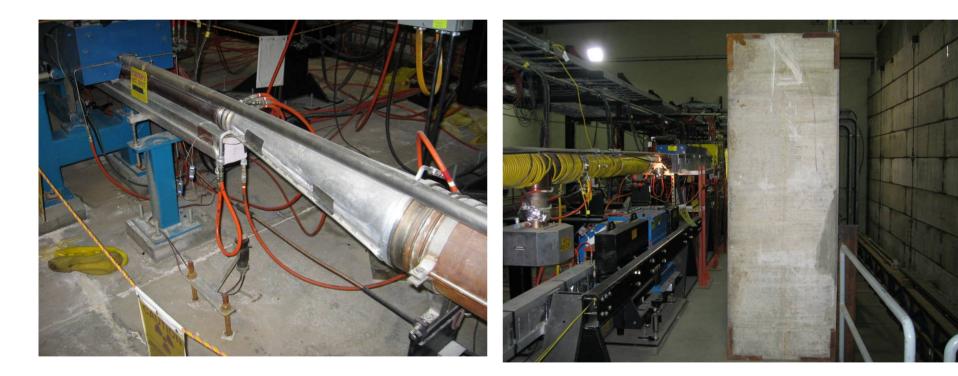

# **PEP-II Injection Line**

## **PEP-II** Injection Septa (two)

#### PEP-II dipoles in 1994 ready for installation

#### **PEP-II** tunnel ceiling

#### PEP-II ground water wall leaks

#### **PEP-II Sump Pumps**

#### Wall Corrosion

# PEP-II Utility work in late March 2007 (3 days) for LCLS

Transite pipes

PEP-II cooling water and air lines

#### **Transition & DND planning**

- Transition plan white paper: input to FY09 budget process
  - Describes transition from fully operational state to a minimalmaintenance state in FY09-FY10
    - Outlines major tasks and timelines for this transition
    - Extrapolations from existing PEP-II and BABAR operational experience
  - Outlines scenarios for dismantle and disposal phase that emerged from discussions with OS/HEP in early May
  - Input to FY09 budget development, FY10-FY11 planning
- Transition and D&D task force: in progress
  - Established at beginning of May to review and refine transition plan and develop next level of planning for D&D in light of white paper scenarios
  - Feedback from this review will be used to develop a more refined and detailed D&D plan in fall 2007

#### **Transition planning assumptions**

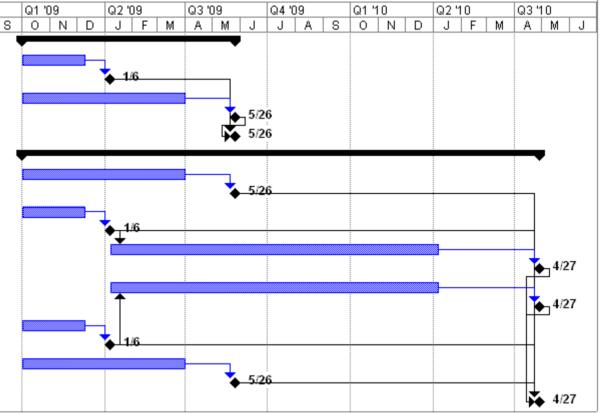

- FY09-FY10: Transition minimal maintenance state
  - B Factory will immediately transition to minimal-maintenance state following end of operations
- FY10-FY14: Minimal maintenance state
  - Kept in minimal-maintenance state to prevent deterioration of equipment
  - Envision possibility for strategic re-use of components
    - For example, potential interest in equipment as contribution to an off-shore Super *B* Factory.
- About FY15: Dismantle and dispose
  - Equipment scheduled for removal, and storage or disposal
  - Costs to be borne by DOE
    - Scenarios for disposal depend on whether existing moratorium on recycling metals from accelerator housing remains in effect or not

## Minimal Maintenance State (MMS)

- PEP-II
  - Cooling systems of magnets and vacuum drained & dried
  - Documentation of parts and spares
  - Vacuum system vented and secured
  - RF systems, including power supplies, klystrons, cavities, circulators, and dumps drained and secured
  - Fire protection, tunnel lighting, water seepage system all maintained
  - Estimate ~\$1 million/year in manpower, M&S, and electricity costs for tunnel maintenance (not equipment)
  - Security watches over the system
  - Crane inspections
  - Controls maintenance for safety issues (PPS/Fire)

#### Tasks and timelines: FY09-FY10

| ID | Task Name                          | Duration |                                    |
|----|------------------------------------|----------|------------------------------------|
|    |                                    |          | $\left\lfloor \cdot \right\rfloor$ |
| 1  | BABAR transition to MMS            | 34 wks   |                                    |
| 2  | Drain & dry all cooling systems    | 10 wks   | 1                                  |
| 3  | Cooling systems drained            | 0 wks    | 1                                  |
| 4  | Develop standalone slow controls   | 26 wks   | 1                                  |
| 5  | Standalone slow controls deployed  | 0 wks    | 1                                  |
| 6  | BABAR transition complete          | 0 wks    | 1                                  |
| 7  | PEP-II transition to MMS           | 82 wks   | 1                                  |
| 8  | Secure electrical hazards          | 26 wks   | 1                                  |
| 9  | Electrical hazards secure          | 0 wks    | 1                                  |
| 10 | Secure mechnical hazards           | 10 wks   | 1                                  |
| 11 | Mechanical hazards secured         | 0 wks    | 1                                  |
| 12 | Drain & dry magnets                | 52 wks   | 1                                  |
| 13 | Magnets drained                    | 0 wks    | 1                                  |
| 14 | Drain & dry vacuum cooling systems | 52 wks   | 1                                  |
| 15 | Vacuum cooling drained             | 0 wks    | 1                                  |
| 16 | Vent & secure vacuum system        | 10 wks   | 1                                  |
| 17 | Vacuum system secured              | 0 wks    | 1                                  |
| 18 | Drain & secure RF systems          | 26 wks   | 1                                  |
| 19 | RF systems secured                 | 0 wks    | 1                                  |
| 20 | PEP-II transition complete         | 0 wks    | 1                                  |
|    |                                    |          |                                    |

# Manpower and budgets for transition

|               | <b>FY09</b> |              | FY10 |              | FY11 |              |
|---------------|-------------|--------------|------|--------------|------|--------------|
|               | FTE         | Budget [k\$] | FTE  | Budget [k\$] | FTE  | Budget [k\$] |
| Accelerator   |             |              |      |              |      |              |
| Systems Labor | 2.2         | 330          | 1.7  | 270          | 0.6  | 100          |
| Operations    |             |              |      |              |      |              |
| Directorate   |             |              |      |              |      |              |
| Labor         | 13.8        | 2070         | 6    | 940          | 1.9  | 280          |
| M&S           |             | 600          |      | 400          |      | 200          |
| Power         |             | 950          |      | 650          |      | 400          |
| Total         |             | 3950         |      | 2260         |      | 980          |

Budget for MMS state is almost entirely building maintenance costs (sump pumps, lights, tunnel integrity) and not directly the cost of maintaining the equipment

# Ramp Down Work Scheduling

- There are other items going on in October 2008:
  - LCLS final construction
  - SABER initial preparations
  - Routine down maintenance repairs for next Linac run
  - PEP-II ramp down will have lower priority during down!
- Is it best for many people to work for a short period (~ 1 month) or a few people for many months (~14)?
- It is likely that the PEP-II ramp down work will be delayed until the linac turns on later in the fiscal year, which avoids overlap with intense linac work period and allows leveling of man power loading.
  - Thus, likely that a slower approach will be better.

## **Dismantling and disposal**

- Major factor: DOE moratorium on removal for salvage of volumetrically contaminated metals from accelerator areas
  - In effect since 2000, waiting for National Regulatory Commission to establish standards
  - Possible to move equipment to other laboratories, but not to recycle commercially; options for disposal may be expensive and/or limited
- Scenario I:
  - Provision for development of onsite storage of BABAR and/or PEP-II components removed from IR halls or tunnels
  - Moratorium does not apply to service buildings and regions in IR halls outside controlled access area
- Scenario II
  - Moratorium resolved, so that material with no residual activity can be removed and recycled

# FFTB Metals Storage (FY2006)

#### FFTB Shielding Storage (FY2006)

#### SPEAR-II Metals Storage (~FY2001)

# Conclusions

- The PEP-II ramp down scope has been identified.
- An initial transition plan has been made.
- Initial budget and manpower estimates have been made.
- A resolution of the Metals Moratorium would help this process.
