

Allosteric Transition of ATCase by Stopped-flow X-ray Scattering with Hiro

Hiroshi Kihara, Kansai Medical University

Hiro joined our group when he was a graduate student at Hiroshima University. We developed a stopped-flow device, and applied it to the allosteric transition

At the Photon Factory: One day, he shouted, "Again, leakage of the mixer! Shit!" ; I also shouted, "Wonderful, we succeed to monitor time-course of allosteric transition" !
